

AI for CX Initiative: Four Offering Overview

How do you evolve your digital flagship to still engage humans and be seen by LLMs at the same time?

Our clients thought they had their Brand website dialed in.

And then...AI.

AI for CX

Merkle's 4 offerings

1

**Agentic-first
Content
Discoverability**

2

**Agentic
Experience
Modernization**

3

**Adaptive
Experience
Personalization**

4

**Customer
Experience
Optimization**

....

1

Agentic-first Content Discoverability

Making sure your brand is the one AI trusts and prioritizes the moment **an agent decides the best path forward.**

Paula Leaman
Sr. Director, Search +AI Discovery

How brands get excluded without knowing it

**AI fills gaps
with whatever
it can verify**

**Inconsistent
information
lowers system
confidence**

**Ranking in
search does not
protect
inclusion**

**Brand
narratives drift
silently**

....

2

Agentic Experience Modernization

Design for **a humans' new deep research needs** in the changed digital experiences, by exploiting Ai.

Chad Borlase
SVP Experience Design

Cam Vizenor
VP Experience Design

We see 4 ways AI will fundamentally change the way customers interact online, creating this **existential shift for brands.**

1. Digital Experience is a coaching conversation.

Conversational interfaces are taking over as the primary way of interaction.

2. More bandwidth = more video.

As AI evolves internet speeds and production capabilities, video becomes the default.

3. You can't afford an "AI oops"

A bad AI experience can do major brand damage—and is majorly avoidable.

4. Gen Alpha is here to stay.

Whether you understand them or not, they are AI natives with incredible purchasing power.

....

3

Adaptive Experience Personalization

Deliver **personalized experiences** at scale that dynamically adjust through AI agents on individual user behaviors, data, and context.

David Schweinfurth
VP, AI Integrations and
Emerging Technologies

Adaptive Experience Personalization

Making it real . . .

"I want agentic,
**but how do I
get there?"**

Focus on rapid
prototyping

....

4

Customer Experience Optimization

Every AI investment your brand makes creates a question: **is it working?** This is how you answer it - with rigor, not faith

Anthony Mills

Sr. Director, Experience Optimization

Initial Areas of Focus for {client}

Content & Behavioral Testing

A/B and multivariate testing on layouts, CTAs, and copy eliminates friction across the funnel. The foundation every optimization program is built on.

{X}%
CONVERSION
LIFT

ML-Powered Experimentation

Multi-arm bandits route traffic to winning combinations in real time. Collaborative filtering surfaces recommendations based on what people do, not what you assume they want.

{X}%
TRAFFIC
OPTIMIZED IN
REAL TIME

Model-Level Optimization

The best teams test upstream of the experience - evaluating model assumptions, not just outputs. Persistent holdout groups reveal the true cumulative impact of AI on lifetime value over months, not campaigns.

{X}%
LTV LIFT
VS.
HOLDOUT

AI Confidence & Trigger Logic

When should AI act versus defer? Factorial design across content, personalization logic, and channel simultaneously - statistically meaningful signal without testing every combination.

{X}%
BRAND-
SAFE
ACTIONS

Testing the Agentic Layer

Which bot trigger retains users? Does adaptive personalization beat static for your highest-value segments? The brands building this measurement infrastructure now will scale AI with confidence. Everyone else is scaling on faith.
